

# Project Management

Our approach to project management involves developing a comprehensive plan, building the right team, and equipping them with the proper tools. We deliver quality service within budget, on time, and with minimal complications. We believe that efficiency—the protection of project resources and the leverage for their optimal use—is vital to the success of any project. We invest resources only after a thorough understanding of project risks, considering such factors as environment, budget capacities, management and executive tolerance to schedule changes, and quality expectations. Our project managers have both of the leadership qualities essential to success—years of experience and a strong technical background. These qualities make them the ideal leaders to correctly identify high-risk project elements.

## Project Management Experience

Birdi & Associates, Inc. provided Project Management services for the implementation of Los Angeles International (LAX) Airport Police Computer-Aided Dispatch and related systems. In this collaborative effort, we introduced the Data911 dispatch system, renovated the existing dispatch center, and installed new dispatch consoles and client machines. Our work entailed the installation of mobile data communications and 50+ Mobile Data Systems, as well as the integration of these systems with the LAX Video Network system (VNET) and the LAX Access Control and Alarm Monitoring system. As part of the installation, we integrated the CAD with CLETS. This project involved skills in program management, systems coordination, and subject matter expertise.
